Instrapac® Single Use Instruments

Robinson Healthcare is a pioneer in the introduction of single use instruments, continuing the company's long tradition of innovation. Launched in 2002 under the name of Instrapac®, the range has developed to become the brand of choice for many healthcare professionals throughout the UK, delivering high quality, reliability and value for money.

Tangible Benefits

Until relatively recent times, reusable instruments were generally the only option for healthcare professionals. Following concerns on the potential risks of cross infection, plus a growing need for cost reduction, single use instruments were introduced. They are now commonly used throughout the NHS, mainly for frequently performed or minor procedures. Single use instruments deliver tangible benefits to healthcare organisations and patients in three ways:

- Save money
- Save time
- Minimise risk of infection

In addition to these key benefits, Robinson Healthcare's Instrapac® range provides clinicians with a comprehensive choice of premium quality instruments, reliable deliveries and exceptional value for money.

Save Money - Revealing the Hidden Costs

There is no doubt that Robinson Healthcare Instrapac® single use instruments offer tremendous cost savings to the NHS. The Instrapac® range is focussed on minor or straightforward procedures performed in hospitals and in the community. It is not intended to replace high value and complex instruments typically used in operating theatres - though Instrapac® can cost effectively complement theatre instrument sets. In a hospital setting, it has been found that costs can be significantly lower using single use instruments compared to reusables - even when on site sterilisation facilities exist. In particular:

- Accident and Emergency
- Maternity, Obstetrics and Gynaecology
- Minor Injuries
- Sexual and Reproductive Health

A study carried out at Aberdeen Royal Infirmary¹ revealed a saving of over 30% when using Instrapac® single use instruments in selected applications. In the community the savings can be even greater as the decision to use reusables may involve developing and running a sterilisation facility. Using Instrapac® may mean that there is no need to run such a facility.

It is important when comparing costs to take into account the full cost of using reusables.

Have you taken into account the following?

- Capital cost of premises and developing the facility, decontamination and sterilisation equipment
- All staff costs including recruitment, training, absence, inefficiency (utilisation), HR cost, National Insurance and pension costs
- Management and administration costs
- Cost of ongoing maintenance and validation of decontamination and sterilisation
- Consumables used
- Capital cost of instruments and the replacement of any lost
- Repair, transport and traceability costs

If you are considering using a third party sterilisation facility, have you taken into account the following?

- Capital cost of instruments
- Lost and damaged instruments
- Repairs
- Transport cost to and from the steriliser
- Increase in instrument stock required to cover longer turnaround times

Using Robinson Healthcare Instrapac® is so simple. You don't have to worry about any of these costs or responsibilities.

Save Time and Improve Efficiencies

When resources are limited, saving valuable staff time is vital. Instrapac® single use instruments can contribute to reducing time lost in the following ways:

- No cancelled procedures or operating lists
- Eliminate the need to check instruments for wear and tear prior to use
- No waiting for instrument collection
- No delays in supply due to sterilisation capacity issues
- No supply shortages due to lost instruments or waiting for repairs
- No supply shortage - Instrapac® is in stock and delivered rapidly when ordered
- Instruments work correctly every time

Improved Infection Control - Reduced Risk to Patients and Staff

Reusable instruments must be thoroughly decontaminated before being re-sterilised and used again. If cleaning protocols are not closely followed, there is an increased risk of onward transmission prion-mediated diseases, such as vCJD.

Single use instruments significantly reduce the risk of cross infection as each instrument is new and unused. Therefore there is no risk of contamination by blood, tissue, bacteria, viruses or prions. Every instrument goes through the sterilisation process and is guaranteed sterile. This offers peace of mind to clinicians and patients. The NHS also makes savings - treatment of surgical site infections (SSI) is estimated to cost approximately £700 million per annum². Minimising infection risk by using single use instruments can help to reduce this cost to the NHS and save lives.

Why Choose Instrapac®?

Instrapac® instruments have been in clinical use for over 15 years, and are now the first choice for many clinicians. This success is based on a number of significant factors:

- High quality instruments and packaging
- Full compliance with the Medical Devices Directive
- Fully certified UK manufacturing facility
- Full control over production process in the UK
- Reliable delivery and extensive stock of finished goods
- First class customer service

Compliance with Legislation and Standards

It is a legal requirement for all medical devices to comply with the Medical Devices Directive (MDD) 93/42 EEC, (from 26th May 2020 the EU regulation on medical devices (MDR) 2017/745), and carry the CE mark. Regulatory requirements differ according to the risk attached to the use of the product. The lower the risk, the easier it is to comply with the Directive.

Single use instruments are relatively high risk as many are surgically invasive and therefore classified as IIa devices. They are therefore subject to greater levels of control than reusables (which are Class I devices except those used on central nervous tissue or the cardio vascular system). Class I devices can be sold without any authorisation from an independent third party - a Notified Body. Class IIa devices such as Instrapac® require a Notified Body to assess the production of the device to the relevant conformity assessment procedure specified in the Directive or Regulation (e.g. Annex II, IV, V or VI of the MDD), and issue a certificate of conformance before a CE mark can be applied and the product sold.

Certification by the British Standards Institution (BSI) verifies that Instrapac® products meet fully the requirements of the Directive. Robinson Healthcare also complies with the following standards and has current certification as part of the CE marking process:

- BS EN ISO 13485:2016 - Medical Devices Quality Management System
- BS EN ISO 14644 Series - Cleanroom Validation and Operation
- BS EN ISO 11135:2014 - Sterilisation of Healthcare Products (EO)
- MDD Annex V Production Quality Assurance - this is the most critical document and is issued by a Notified Body. It demonstrates that the facilities and systems necessary to secure and maintain the sterility of a product meet the required standards

UK Production Facility

Robinson Healthcare retain control over the production of Instrapac® products by designing the products, specifying production methods and quality control procedures, inspecting finished product and packing and sterilising at the company's large manufacturing facility in Worksop, UK. A large Class 7 cleanroom provides hygienic packing facilities, with sterilisation carried out at an EO gas sterilisation facility in the UK.

Products comply with the relevant British Standards for surgical instruments and the quality control team ensure that products meet specification before being released for packing. All metal products are manufactured using medical grade stainless steel. The Instrapac® range is packaged in high quality, easy to peel packs. All procedure packs are presented wrapped in a sterile field for convenience.

Robinson Healthcare fully understands that a consistent and reliable supply of quality products is critical to the smooth and efficient running of healthcare services. Consequently, significant stocks of finished goods and raw materials are held to maintain a reliable, uninterrupted supply to customers.

After use, instruments should be placed in a sharps container, following the guidance in HTM07.01. Orange lidded containers offer a much wider range of options for the recycler, rendering the instrument safe by alternative methods other than incineration.

This method enables recycling and reduces landfill.

Choosing The Right Supplier

How can you be sure that the instruments you purchase are fit for purpose, perform effectively, comply with appropriate regulations, are always available when required and represent value for money?

Robinson Healthcare suggest the following checklist:

- Are products AQL inspected, packaged and sterilised in the UK to maintain control over quality and supply?
- Does the supplier have BS EN ISO 13485:2016 - Medical Devices Quality Management System certification?
- Is the sterilisation process certified to Annex V Production Quality Assurance?
- Are you able to verify certification and check the status with the Notified Body?
- Have you got a copy of the Declaration of Conformance for each device and confirmed the device classification?
- Can you visit the facility to assess the supplier's capabilities and quality?
- Are significant stocks of finished goods held to ensure an uninterrupted supply?

Instraspec® – The Unique, Unbreakable Plastic Speculum*

Instraspec® is a high quality, reliable, sterile disposable vaginal speculum that also delivers exceptional value for money.

Instraspec® is the only single-use plastic vaginal speculum to be classified as a Class IIa medical device and is indicated for both gynaecological observation/examination and surgically invasive procedures. Manufactured from an advanced polymer, Instraspec® has been independently tested and proven to be unbreakable in normal clinical use*.

Safe and Strong

- Independently proven to be strong and unbreakable* offering complete peace of mind
- The only Class IIa approved single use plastic vaginal speculum*
- Approved for examination and access to the vaginal cavity during observation/assessment
- **Safe for use in surgically invasive procedures, including those requiring diathermy**
- Guaranteed sterility to eliminate cross infection
- Latex free material and packaging

Design Comfort

- Silent, smooth and quick locking mechanism for reduced patient anxiety
- Anti-pinch design for improved patient comfort
- Crystal clear for maximum visibility of tissue

Ease of Use and Convenience

- Colour coded packaging for quick and easy size selection
- Individual, easy tear packs for guaranteed sterility
- Convenient flip front case for rapid dispensing
- Eliminates the need for decontamination and re-sterilisation, reducing costs and saving time

Instraspec® is supplied in a convenient flip front dispensing case

* Instraspec® is manufactured from an advanced polymer which is unbreakable in normal use, independently tested by SMTL, Princess of Wales Hospital, Swansea. Instraspec® is now classified as a Class IIa medical device, and is indicated for use during gynaecological observation/examination and for surgically invasive procedures. All other single-use plastic vaginal speculums are currently classified as Class I medical devices, and are therefore not indicated for use during surgically invasive procedures. Text correct at time of printing.
